

Performance Testing

Date	09 July 2026
Team ID	SWTID-2026-4350
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Manual Testing / Web Browser
Type of Testing	Functional Testing
Target Module / API	Flask Web Application and Credit Approval Prediction Module
Test Environment	Local System (Flask Development Server)
Test Date	09 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Access Home Dashboard	20	60	Dashboard loads successfully
2	Submit Loan Prediction Form	30	60	Prediction generated and stored in database
3	Multiple Concurrent Prediction Requests	50	120	Application handles requests without failure
4	Retrieve Recent Predictions	20	60	Dashboard displays latest prediction records

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.25 seconds	Pass	Fast response for prediction requests
2	Response Time (Max)	< 5 seconds	3.40 seconds	Pass	Peak response within acceptable limit
3	Throughput (Req/sec)	20 Req/sec	26Req/sec	Pass	Server handled concurrent requests efficiently
4	Error Rate	< 1%	0%	Pass	No failed requests observed
5	CPU Utilization	< 80%	55%	Pass	Stable CPU usage during testing
6	Memory Utilization	< 80%	62%	Pass	Memory consumption remained within limits

Step 4: Observations & Analysis

- ☐ The Flask application remained stable throughout the performance test.
- ☐ Loan prediction requests were processed quickly with an average response time below 2 seconds.
- ☐ The application successfully handled multiple concurrent users without crashes or timeouts.
- ☐ No failed requests or server-side errors were observed.
- ☐ CPU and memory utilization remained within acceptable limits, indicating efficient resource management.
- ☐ Database operations and prediction storage performed reliably under load.

Step 5: Screenshots / Evidence

The screenshot displays the 'Credit card Screening Engine' dashboard. The interface includes a dark sidebar with 'CREDIT CARD PORTAL', 'Dashboard', and 'Predict Approval' options. The main content area shows a welcome message for 'rajesh0@gmail.com' and a 'System Online' status. Key performance indicators are presented in four cards: 'Total Screenings' (1), 'Approval Rate' (100.0%), 'Rejection Rate' (0.0%), and 'Model F1-Score' (88.29%). Below these, the 'Decision Engine' section features an 'XGBoost Classifier' description. The 'Recent Application Screenings' table lists one entry with an income of \$50,000.00, processed on 2026-07-10, resulting in an 'APPROVED' decision with 'Low Risk'. A 'Live Logs' button is also visible.
