

Project Initialization and Planning Phase

Date	01 July 2026
Team ID	SWTID-2026-4350
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Risk levels and approval outcomes need to be predicted and stored reliably
PS-1	A loan applicant	Check whether I am likely to get a loan approved	I do not know how lenders may evaluate my profile	My income, employment details, family status, housing type, and credit history all affect approval	Uncertain about my chances of getting a loan
PS-2	A loan applicant	Submit my personal and financial details easily	The approval process can feel confusing and slow	I am not sure which details matter most in the decision	Anxious and hesitant about applying
PS-3	A bank analyst or staff member	Evaluate applicant eligibility quickly	Manual review of many applications takes time	Applicant records, credit history, and prediction results need to be organized and consistent	Pressured to make accurate decisions faster
PS-4	A bank administrator	Track loan application outcomes and approval trends	It is difficult to monitor overall performance manually	I need dashboard statistics, recent predictions, and model information in one place	Concerned about efficiency and decision quality
PS-5	A financial institution	Improve loan decision-making using machine learning	Traditional approval workflows may be slow or inconsistent	Risk levels and approval outcomes need to be predicted and stored reliably	Motivated to reduce risk and improve operational accuracy
